Education

University of Seoul — *Seoul, S. Korea*

M.S. in Electrical and Computer Engineering — *Sep. 2026 – Present*

- Computer Vision Lab (CVLab), advised by Prof. Hongje Seong

Hochschule München (HM) — *Munich, Germany*

Exchange Student — *Mar. 2024 – Jul. 2024*

- Computer Science (Informatik)

University of Seoul — *Seoul, S. Korea*

B.S. in Electrical and Computer Engineering — *Mar. 2020 – Aug. 2026*

- Major GPA: 3.90/4.5; Overall GPA: 3.78/4.5

Publications

ViewSplat: View-Adaptive 3D Gaussian Splatting for Feed-Forward Synthesis

Moonyeon Jeong, **Seunggi Min**, Suhyeon Lee, Hongje Seong

European Conference on Computer Vision (ECCV) — *2026*

Research Experience

Computer Vision Lab (CVLab) — *Seoul, S. Korea*

Undergraduate Researcher — *Apr. 2025 – Aug. 2026*

- Conducted research on 3D reconstruction, focusing on feed-forward 3D Gaussian Splatting (3DGS) and generative 3D scene reconstruction.
- Explored 3D scene modeling for Real2Sim applications, aiming to reconstruct structured and simulation-ready environments from real-world observations.

Awards

Kookmin University Autonomous Driving Competition — *Kookmin University*

Team Leader — *Jun. 2025*

- Ranked 9th out of 82 participating teams in the final competition.
- Developed the ROS2-based autonomous driving framework, integrating camera and LiDAR perception with vehicle control modules.
- Implemented and refined a vision-based lane-following pipeline using classical image-processing techniques, including Hough-transform-based lane detection.
- Implemented YOLO-based obstacle and vehicle detection and combined it with LiDAR-based inter-vehicle distance estimation to enable safe lane-change decisions.

VLM-Based Assistive Smart Glasses for the Visually Impaired — *University of Seoul*

Team Leader — *Dec. 2025*

- Won 1st place in the competition with the proposed system.
- Proposed and led the development of VLM-based assistive smart glasses for visually impaired users.
- Developed a server-side VLM inference pipeline that receives images from the wearable device, queries the Gemini API, and returns generated responses in real time.
- Integrated image capture, device–server communication, and VLM inference into an end-to-end working prototype and demonstrated the complete system.

Global Macroeconomic-Conditioned Multi-Stock Price Forecasting — *University of Seoul*

Team Member, Presenter — *Dec. 2025*

- Achieved 1st place among project teams in the course evaluation.
- Proposed incorporating global macroeconomic indicators into multi-stock forecasting and integrated FiLM-based global conditioning with stock-wise self-attention.
- Conducted hyperparameter and sequence-sensitivity studies across attention configurations, model dimensions, input window sizes, and prediction horizons.
